Protect your land, brand, equipment, and fuel assets with Titan and ensure your business always runs at peak efficiency.

Environmental Management

Titan's Environmental Management software protects your valuable assets from the many risks associated with spills, releases, and regulatory non-compliance. It keeps vital records at your fingertips including up-to-the-minute reporting for facility, tank, line, equipment, and regulatory information. With a robust workflow that reminds you of important renewal and testing dates, you'll know exactly what you need to do, by when, to keep your operations in complete compliance with federal, state, and local regulations.

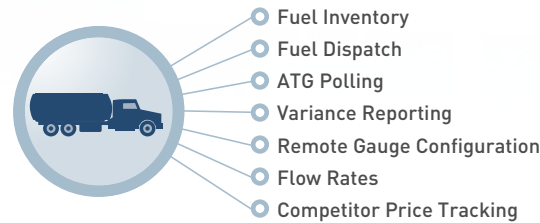

Software that automates:

Fuel Optimization

Titan's Fuel Optimization software gives you the real-time visibility and control of your fuel operations you need to eliminate risk and maximize profits. You can monitor inventory and alarms, trigger dispatch, optimize alarm response, and remotely manage ATG gauges and gauge configurations. Our polling engine—the cloud version of Veeder-Root's Inform.net (developed by Titan) — is the fastest in the world, allowing you to poll thousands of gauges in mere seconds. So you can poll and analyze ATG data at the click of a button, anytime, anywhere.

Software that optimizes:

Facility Workflow

Titan's Facility Workflow software provides central management of all your facility maintenance demands saving you significant costs associated with downtime and repairs, while improving efficiencies. You can create, assign, track, and manage the entire lifecycle of a work order. What's more, Titan software also tracks your lease information, asset inventories, and essential store permits, triggering emails when renewals are due and providing central storage of related e-documents and photos.

Software workflow that manages:
